Github Commands

08 April 2025   16:12

Git clone ssh link
Git add .
Git status
Git commit -m "base code"
Git push origin main

If you want to clone a specific file then use

Git clone -b branch name ssh link

If you want to pull changes use command
Git pull origin main

When you create a dev branch with main branch and wan to push changes to dev branch then use
Git push origin dev

Once the code is ready you can merge both the dev and branch from github using pull requests
